Forecast for Tuesday 01 Nov 2022

Weather: Heavy rain will clear away northeast overnight. Perhaps some early brightness over eastern hills, but some low cloud and mist will linger after overnight rain and showery outbreaks of rain in west will soon push northeast. This area of rain will clear away mid-morning with then a drier and brighter interlude, with perhaps some sunshine, but also a few sharp showers will linger. Becoming cloudier again in the afternoon with longer spells of showery rain developing, some of this will be heavy and could also be thundery. Fewer showers in evening with some clear spells developing.

Chance of cloud-free hill tops above 600m: 10% in early hours, then generally 30% through Tuesday, though around 60% from mid-morning into the afternoon and again late evening.

Low cloud and visibility: Extensive cloud down to 300 or 400m overnight, but breaking up as rain clears. Scattered cloud at 400m through the day, but perhaps more extensive in showery rain, with broken or extensive cloud between 500 and 700m, though likely more scattered for a time from mid-morning. Good visibility out of rain, but murky periods with rain as lower cloud merges with main cloud layers at times and falling poor in heavier outbreaks of rain beneath cloud.

Meteorologist's View

Rather wet and murky at times, especially on mid-level and upper slopes through the afternoon with very wet conditions underfoot and some navigational difficulties.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
15:00 on Mon 31 Oct 2022	2mm	7.8mm	15mm

Forecast for Wednesday 02 Nov 2022

Weather: A mostly dry, bright start, but heavy, showery rain soon spreading from west. More prolonged heavy rain through the afternoon and very windy bringing challenging conditions. Rain clearing late evening.

Maximum wind: SW 25-30mph at first, but increasing 30-40 gust 50 mph by the afternoon, though 50 gust 65mph is possible on summits. Decreasing a little late afternoon then turning more westerly and decreasing 30 gust 40mph in evening.

Chance of cloud-free hill tops above 600m: 80% soon 10%

Low cloud and visibility: Mainly scattered cloud above 800m at first, but soon extensive cloud down to 600m in showery rain and then lowering to 400m at times. Mainly good visibility at first, but becoming poor sometimes very poor in rain.

Temperature: **Valleys:** Plus 6 C rising to plus 10 C
At 600m: Plus 5 C
Freezing level: Above the tops
